ethical style 2018

- **leading Solingen production company** for high-quality manicure, pedicure, cosmetic and shaving articles
- **made in Solingen proven quality - since 1930**
- **ethical style award for environmentally-friendly, resource-saving production**
- **certified production and delivery processes** according to DIN EN ISO 9001
- **OEM Manufacturer**

BECKER SOLINGEN

Sustainably produced

Made in Solingen

Made in Solingen

The company Becker Solingen has been specialised in the production of cuticle scissors, nail scissors, tweezers, nail nippers, cuticle nippers and sapphire nail files of premium quality **since 1930.**

Environmentally-friendly, low-polluting and energy-saving working steps are particularly important in this family business, which is now in its third generation.

All systems are equipped with **ultra-modern exhaust air systems** and a **treatment plant for the re-use of consumption water.** The **in-house combined heat and power plant** covers 45% of the electricity required for production. It also supplies the hot water to keep the electro-plating shop basins and underfloor heating of the entire company building at the right temperature. **Residual materials** which result from the production process are almost **completely recycled. The consequence of this is that hardly any waste is produced.**

Grinding tweezers

Spot-welding tweezers

Sewing the leather cases

Certified

The steel items are manufactured with the help of state-of-the-art automation technology, robot support and experienced Solingen master craftsmen.
Each product is tested separately before leaving the production halls.

Becker Solingen is certified according to DIN EN ISO 9001. This guarantees high product quality and reliable, punctual deliveries – even in large quantities.

Intertek Intertek

Winner of the ethical style award

The special award for environmentally-friendly, resource-saving production was given to ...

For the sake of the environment

• Eco-Friendly materials, Re-/Upcycling design and Life-cycle design concept:

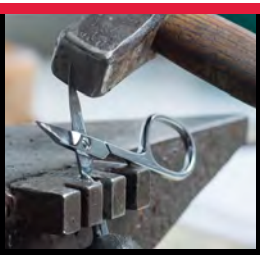

The steel and plastic materials used for production can be melted down again completely and are fully recyclable. The products themselves can be repaired or reground.

• Eco-Optimised production:

Use of the combined heat and power plant, water recycling plant and recycling of the production residues.

Milled nipper components

• Fair & Social production:

For decades, the Becker Solingen products have been packed reliably by regional social institutions and non-profit workshops.

Handmade manufacturing:

Becker Solingen products are professionally sharpened by Solinger master craftsmen. Solingen, the "city of blades", is known worldwide for its craftsmanship.

Grinding scissors according to Solingen grinding techniques.

The solution for nickel allergy sufferers

Nickel-free surface coating process

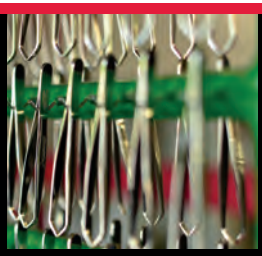

anti-allergenic *anti-allergenic*

(EU Directive 94/27/EC, Oeko-Tex 100 ff.)

With the newly developed, skin-friendly metal surface coating process known as **VITALOY®**, a special method has been created with which **metal surfaces can be finished completely nickel-free** for a long service life. Matt or glossy, also combined with chrome or gold coatings, metal parts can be reliably protected against tarnishing and corrosion. The good covering power and the high degree of hardness can even withstand strong deformations. **The surface does not break and remains protected.** This has been successfully tested over a prolonged period with various assays of materials in the laboratory.

The innovative, skin-friendly coating is **just as visually brilliant as that of the high-gloss** nickel-plated surface.

As a service provider for other companies ...

Becker Solingen offers the possibility of coating metal parts with a size of up to 15 cm in its own electro-plating shop.

VITALOY
OBERFLÄCHE NICKELFREI

NAIL SCISSORS

Quality from Solingen

- Small scissors with mostly slightly curved blades for precise shortening of the fingernails and toenails.
- With screw for fine adjustment as a special quality feature.
- Nail scissors for left-handers:
  Ideally, these scissors are also required by everyone to cut the nails on their right hand, so that the nails are not crushed but shortened just as they should be.

Multiple Awards
- FORM# Design Award
- Home & Trend Award
- „Germany at its best“

PREMIUM-QUALITÄT
Mit Selbstschärfe-Effekt

TIP

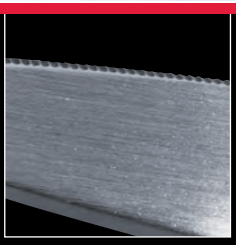

- When cutting the nails, it is advisable to ensure that they remain so long that the nails protrude about one millimetre above the fingertip.
- After cutting, the rough and uneven edges of the nails should be filed.

Straight cutting edge

Curved cutting edge
The slightly curved scissors make it easier to shorten the nails in their natural shape

Micro-serration
The maximum-grip micro-serration facilitated the non-slip shortening of the nails

Baby Nail Scissors
The rounded tip of the scissors enables the injury-free, gentle cutting of particularly soft baby nails

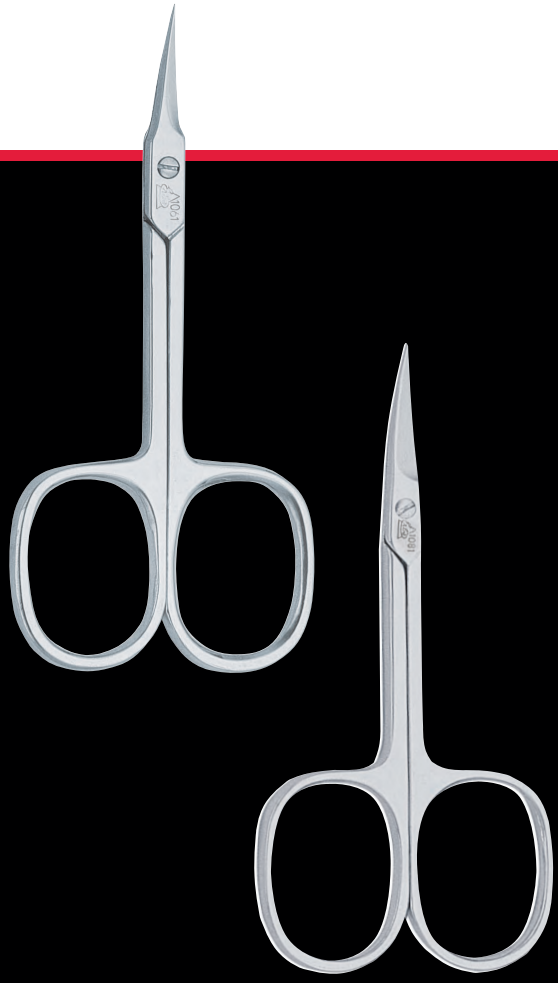

Combination Scissors
The cuticle can be removed with the fine section at the front, while the nails can be shortened with the rear wider section

CUTICLE SCISSORS

Quality from Solingen

- Small scissors with slightly curved blades and a very sharp cutting edge for the careful and easy removal of fine cuticles. This can be used to precisely remove a hangnail (almost detached skin tip on the nail) or superfluous skin.
- With screw for fine adjustment as a special quality feature.
- Cuticle scissors also available for left-handers.

made in Solingen

OIL resin-free

sharp

+Ni

VITALOY

Rostfrei

Curved cutting edge
For the removal of excess skin.

Turmspitze
Suitable for the precise removal of even the smallest skin residues.

TIP

- The cuticle should be carefully pushed back with a cuticle pusher or hoof stick.
- The cuticle scissors should never be used as nail scissors, as they are more sensitive and become blunt more quickly.
- Please use only resin-free oil for long-lasting care of the scissors.

NAIL AND CUTICLE NIPPERS

Quality from Solingen

- Cuticle nippers are stable instruments for the easily removal of excess cuticle.
- Nail nippers are used to shorten strong fingernails or toenails, which can then be accurately shaped and shortened.
- Nippers are available in the two qualities of „laid on“ and “pushed through“ and with different types of springs for easier handling.
  Detailed information can be found on page 18-19.
- The nail nippers are also available in the head cutter form, which enables them to be handled at a favourable cutting angle.
- Cuticle nippers are produced in the classic nipper shape and in a scissor shape with eye.

made in Solingen

OIL resin-free

sharp

+Ni

VITALOY

EDELSTAHL Rostfrei

TIP

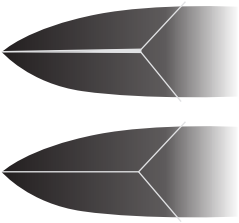

- Nail nippers are ideal for cutting strong or horny nails. With little force, they also enable effortless shortening of the nail without squeezing it.

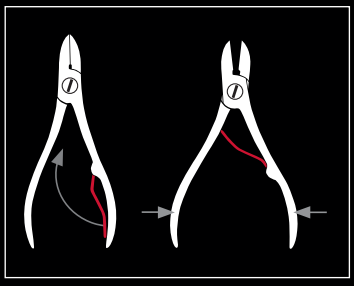

NAIL AND CUTICLE NIPPERS

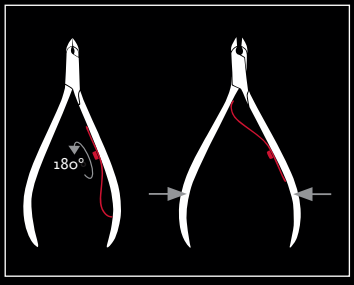

Quality from Solingen

Quality Feature
First-class nail clippers are characterised by the following feature:
They move apart from one another slightly from the tip to the rear.
The gap closes only when the nippers are slightly squeezed and then cut.

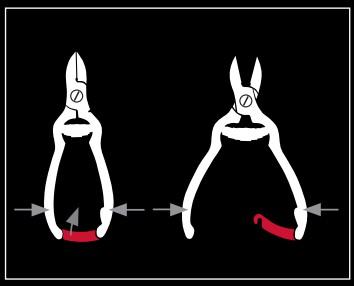

Folding spring
Fold the spring upwards before cutting the nails. Press both handles together to remove the nails. The folding spring is mainly used for nail nippers.

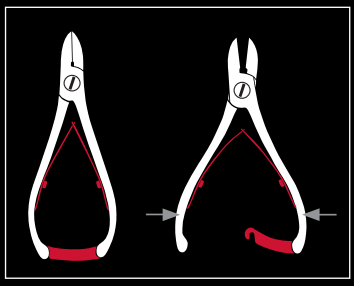

Torsion spring
Before cutting the cuticle, turn the torsion spring upwards through 180°. Press both handles together to operate. This spring is mainly used for cuticle nippers.

Buffer spring
Before use, press the two handles firmly together so that the retaining device is released and the buffer spring is subjected to its effective force. To remove the nails, press both handle slightly together.

Double spring
Before cutting the nails, press both handles together firmly so that the retaining device is released.
Now the spring can unfold its full effect. To remove the nails, press both handles together slightly.

NAIL CLIPPERS

Quality products

- Nail clippers are small, handy instruments for the accurate shortening of fingernails and toenails.
- Most clippers are used by turning the lever at the top through 180° and then folding it through 180° as well to achieve the lever effect.
- Some nail clippers are equipped with a nail file or nail catcher.

NICKELFREI

EDELSTAHL
Rostfrei

USE

- The nail clippers should be applied to the nail in such a way that 1 millimetre of white nail edge remains. Then smooth the nail with a file.

NAIL FILES

Quality from Solingen

- Nail files shorten, round, smooth and seal the fingernail.
- Sapphire nail files are made of elastic, dimensionally-stable spring steel. One side is coarse for shaping the nails, while the other side is fine for gently smoothing the nail. The tip is usually shaped as a nail cleaner, with a cuticle pusher often being integrated into the handle. The edges of the ERBE sapphire files are carefully ground after sapphire coating in order to obtain smooth edges without grains.
  This prevents injuries to the nail bed.
- The grooved file is a very special file.
  The recessed filing surface is curved and guides the nail without slipping into a groove. As with all sapphire files, there is also a coarse and a fine side here. The coarse side is used for the gentle shaping of the nails, whereas the fine side smoothes the nail edges. The grooved file is ergonomically shaped and ideal for out and about because it is small and manageable.

APPLICATION & TIPS

- When filing the nails, make sure that the nail file is always applied straight. It is important that the nails are always filed in one direction only.
- In order to create a cultivated and harmonious look, it is a good idea to keep the nails on both hands or feet the same length at all times.
- Do not use glass nail files if they are damaged.

NAIL FILES

Quality products

- Glass nail files are particularly suitable for sensitive, brittle nails, but are also excellent for artificial nails. They are characterised by their gentle filing properties and their long-lasting quality, as the very fine-pored grinding surface inserted into the glass surface does not wear out. They are hygienic, easy to clean with water and suitable for allergy sufferers.
- Polishing files consist of three sides with different grain sizes. From coarse to fine, they are used to polish the nail surface to a high gloss.
- Ceramic files are particularly gentle during the filing process. They seal the fingernail and create very smooth edges. Ceramic files are very durable. They are easy to clean and therefore very hygienic.
- Sand leaf files, like most files, have a coarse and a fine side, but are intended for single use only.
- Paper files are elastic files that adapt ideally to the nail during the filing process. They usually have a coarse and a fine side. The Eco-Boards are very environmentally friendly files made of recycled material and do without a plastic core.

TWEEZERS

Quality from Solingen

- Tweezers are versatile little helpers for face and body care. Mostly they are used to pluck the fine hairs of the eyebrows.
- The gripping surfaces of the tweezers are precisely aligned with each other, as each individual pair of tweezers is ground by competent skilled workers to grip the hair.
- The distinction of the tweezers is mainly in the tip. This refers to the open side that grips the hair.
- Automatic tweezers make it easier to pluck fine hairs. As soon as the hair is gripped, it is automatically pulled back with a jerk.
- Anatomical tweezers for the medical field have lateral grooves on the tip for a better grip.
- Powder-coated tweezers are available in various fashionable colours. The tweezers are therefore visually enhanced and the material is protected.

Rostfrei

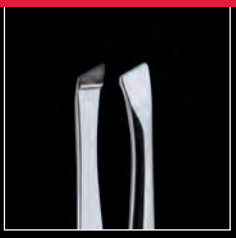

Tip
Suitable for the precise plucking of the finest eyebrow hairs and removing the smallest splinters

Straight
Classic, wide surface for the effortless plucking of single or several fine hairs

Oblique
The wide, tapering gripping surface enables the fast and precise plucking of single or multiple eyebrow hairs

Angled
A narrow, inwardly curved surface for the effortless gripping of fine hairs

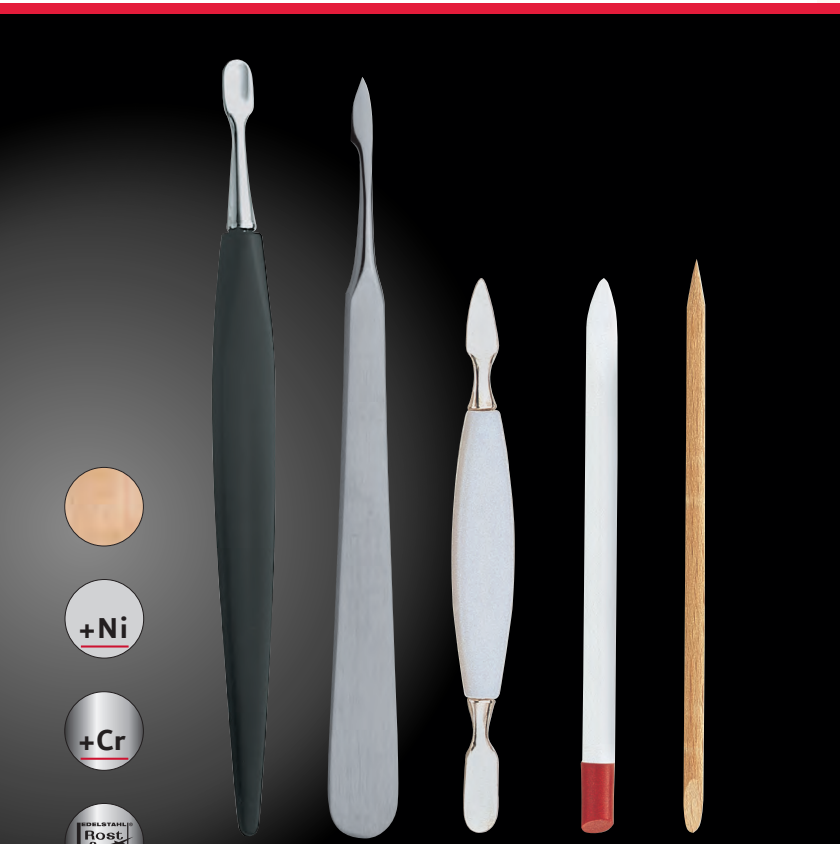

Automatic
The hair is automatically pulled back with a jerk after being gripped

MANICURE INSTRUMENTS

Quality products

- Nail-care instruments are ideal for the preparation and care of the nail so that it is shown off to its best effect.
- Nail cleaners have a triangular tip, which is ideal for cleaning the edges of the fingernails.
- Cuticle pushers with spatula-shaped heads are perfectly suited to push back the cuticle in the area of the nail bed. The rubber hoof and the rosewood stick are also perfect for this purpose.
- Cuticle knives provide a small, sharply ground blade to remove excess cuticle.
- 2-in-1 instruments combine the characteristics of two different care instruments.

TIPS

- Before the manicure or pedicure it is advisable to soak the fingernails or toenails in lukewarm water for 5 minutes. A drop of oil or soap can also be added for better care.
- After the manicure, a nurturing cream can be applied.
- The cuticle should be massaged regularly with oil so that it remains supple and does not tear.

PEDICURE INSTRUMENTS

Quality products

- Pedicure instruments are specially designed to treat the feet.
- The corneal rasp is an instrument used to remove thin layers of cornea and enables the treatment of sensitive areas.
- The corneal plane, on the other hand, is recommended for particularly thick corneas.
- Ceramic corneal files offer a coarse side for removing the cornea and a fine side for smoothing the treated area. The ceramic stones do not wear out. This means that the file has an extremely long period of use.

TIP

- The toenails should end with the toe and be cut straight. This can prevent infections or in-grown nails.

OTHER SCISSORS

Quality products

- With screw for fine adjustment as a special quality feature.
- The beard and nose hair scissors are perfect for trimming the beard and removing the nose hairs. Its rounded tip serves to prevent injuries.
- Hairdressing scissors are extra sharp for perfect shortening of the hair.
- Household scissors are universally applicable for paper, textile and household work.

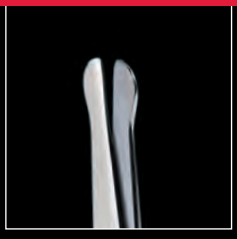

Rounded
The rounded tips enable the safe removal of beard and nasal hairs

Thinning Scissors
Toothed scissors for thinning out the hair

Hairdressing Scissors
Pointed scissors for accurate and precise hair shortening

Embroidery Scissors
Fine tip, ideal for hand-icrafts. Excellent for threads and fine fabrics
